Be sure to work backwards from date of intake until you have captured the last	three years. Then count breaks

Be sure to work backwards from date of intake until you have captured the last three years. Then count breaks in experiencing homelessness to identify separate times or episodes. Then count the total months experiencing homelessness.

"Approximate date homelessness started" should be entered as the first day of episode 1. You can interpret this question more accurately as "approximate date the most recent episode of homelessness started."

In this case, the client info would be entered into the Program Entry as follows:

Approximate date homelessness started: 6/1/23

Number of times on the street, in ES, or SH in the past three years including today: Three times

Total number of months homeless on the street, in ES or SH in the past three years: More than 12 months (22)
